^{*} Inflation - control target / * Cible de maîtrise de l'inflation

(1) Note: Although the target is expressed in terms of the total CPI, the Bank of Canada bases its policy actions on a core measure of the CPI that excludes the eight most volatile components (fruits, vegetables, gasoline, fuel oil, natural gas, mortgage interest, inter-city transportation and tobacco products) as well as the effect of indirect taxes on the remaining components. Bien que la cible soit exprimée en fonction de l'IPC global, la Banque du Canada fonde ses décisions de politique monétaire sur un indice de référence qui exclut de l'IPC les huit composantes les plus volatiles (fruits, légumes, essence, mazout, gaz naturel, intérêts hypothécaires, transport interurbain et produits du tabac) ainsi que l'effet des impôts indirects sur les autres composantes.

Core CPI: The CPI excluding the eight most volatile components (fruits, vegetables, gasoline, fuel oil, natural gas, mortgage interest, inter-city transportation and tobacco products) as well as the effect of indirect taxes on the remaining components. CANSIM identifier for this series (in level terms) is V36398. / La Banque utilise comme indice de référence l'IPC qui exclut les huit composantes les plus volatiles (fruits, légumes, essence, mazout, gaz naturel, intéréts hydonéeaires, transport interurbain et produits du tabac) ainsi que l'effet des impôts indirects sur les autres composantes. Le numéro d'identification de Cansim applicable à cette série (homées exprimées en valeur absolue) est le V36398.

CPIXFET: The CPI excluding food, energy and the effect of indirect taxes. / IPCHAEI: IPC hors alimentation, énergie et effet des impôts indirects

CPIW: In this measure, each component of the total CPI is multiplied by an additional weight that is inversely proportional to the component's volatility, so that the more volatile the component the less it influences the overall index. / Dans IPCP, chacune des composantes de l'IPC global est multipliée par une pondération additionnelle qui est inversement proportionnelle à la variabilité de la composante, afin que les plus volatiles d'entre elles influencent moins l'évolution de l'indice global.
